

Install Sim_generations on Windows

Step 1: **Install Python** (if not already installed)

1. Go to <https://www.python.org/downloads/windows>

Click Downloads button then the Python button under Downloads for Windows.

Save the python***.exe file in your Downloads directory, then double-click on it.

Be sure to click on the check box “Add python.exe to PATH”. Very important!

2. Click “Install Now”.
3. Click the Close button.

Step 2: **Install Git for Windows** (if not already done)

<https://git-scm.com/downloads>

Click on "Windows"

Click on "Click here to download"

Save the Git-*.exe file in your download directory and then double click on it.

Accept the default installation directory and all the default recommendations.

In cmd window type:

cd C:\Users\[YourUsername]\ (where Sim_generations is to be installed)

git clone https://github.com/RoyalTr/Sim_generations.git

Step 3: **Set Up a Virtual Environment**

1. In the cmd window type: cd C:\Users\[YourUsername]\Sim_generations
2. Type: python -m venv venv
3. Type: venv\Scripts\activate
4. Type: pip install -r requirements.txt

Each time you want to use Sim_generation:

cmd then type cd C:\Users\[YourUsername]\Sim_generations\

venv\Scripts\activate

Step 4: Run the program you want e.g.,

cd Fix_1_haplo

python Fix_1_haplo.py

To close the venv when done, type exit.
